Pluggable Call Control Application Program Interface

**OFFICE ACTION RESPONSE** 

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Dear Sir:

In response to the Final Office Action mailed September 26, 2003, reconsideration and further examination of the application is hereby requested. Kindly consider the following:

<u>CERTIFICATE OF TRANSMISSION</u>

I hereby certify that I am causing the above-referenced correspondence to be facsimile transmitted to the US Patent and Trademark Office on the date shown below:

Krista A. Mathieson

Name of Person Faxing Correspondence

Docket No.: P9889 Appl. No.: 09/750,532

3 740 6962

Docket No.: P9889

### **INTRODUCTORY COMMENTS**

### Request for an Extension of Time

This Office Action Response is submitted in response to the Office Action dated September 26, 2003 for which the shortened statutory period for response was set to expire on December 26, 2003. This Office Action Response is being submitted concurrently with a Petition for Revival including authorization to charge any required fee. In the event any extension of time fee is required, or any other fee related to this Response is required, please consider this a request therefore. Authorization is hereby given to charge Deposit Account No. 50-0221 for such fee or fees.

### Authorization to Charge Deposit Account

Authorization is hereby given to charge Deposit Account No. 50-0221 for any fee or fees related to this Office Action Response.

## **AMENDMENTS TO THE SPECIFICATION**

No amendment to the specification is submitted.

## AMENDMENTS TO THE CLAIMS

## Listing of claims:

1. (Currently amended): A plugable call control application program interface, comprising:

a base plugable call control application program interface to expose a common set of function calls, properties, and callbacks to be utilized by a plurality of call control protocols, wherein the call control protocols are Internet Protocol (IP) telephony call control protocols; and

an extended application program interface to provide at least one of advanced function calls, properties, and callbacks beyond the common set.

2. (Original): The plugable call control application program interface according to claim 1, further including:

a platform isolation layer having a reduced set of basic system functionality to interact with the base plugable call control application program interface and the extended application program interface; and

a software application executing on a communications system that accesses the base plugable call control application program interface to initiate a communication utilizing one of the plurality of call control protocols.

- 3. (Original): The plugable call control application program interface according to claim 2, wherein the communications system is a computer system.
- 4. (Original): The plugable call control application program interface according to claim 2, wherein the communications system is an embedded system.
- 5. The plugable call control application program interface according to claim 1, wherein the plurality of call control protocols include at least one of an International

Docket No.: P9889 Appl. No.: 09/750,532

Telecommunication Union (ITU) H.323 protocol, a Session Initiation Protocol (SIP), and a Media Gateway Control Protocol (MGCP).

- 6. (Canceled)
- 7. (Original): The plugable call control application program interface according to claim 1, wherein the plugable call control application program interface is an American National Standards Institute (ANSI) "C" application program interface.
- 8. (Original): The plugable call control application program interface according to claim 1, wherein the at least one of advanced function calls, properties, and callbacks provide additional protocol-specific functionality to at least one of the plurality of call control protocols.
- 9. (Original): The plugable call control application program interface according to claim 1, wherein the at least one advanced function calls, properties, and callbacks beyond the common set is accessed using the base plugable call control application program interface.
- 10. (Original): The plugable call control application program interface according to claim 1, wherein the extended application program interface provides protocol specific information along with base defined callbacks.
- 11. (Currently amended): A method of performing call control on a communications system, the method comprising:

providing a common set of function calls, properties, and callbacks to be utilized by a plurality of call control protocols, wherein the call control protocols are Internet Protocol (IP) telephony call control protocols;

providing at least one of advanced function calls, properties, and callbacks beyond the common set; and

Docket No.: P9889 Appl. No.: 09/750,532

accessing the common set of function calls, properties, and callbacks to initiate a communication utilizing one of the plurality of call control protocols.

12. (Original): The method according to claim 11, further including: providing a reduced set of basic system functionality to interact with the common set of function calls, properties, and callbacks; and

executing a software application on a communications system to access the common set of function calls, properties, and callbacks to initiate the communication utilizing one of the plurality of call control protocols.

- 13. (Original): The method according to claim 12, wherein the communications system is a computer system.
- 14. (Original): The method according to claim 12, wherein the communications system is an embedded system.
- 15. (Original): The method according to claim 11, wherein the plurality of call control protocols include at least one of an International Telecommunication Union (ITU) H.323 protocol, a Session Initiation Protocol (SIP), and a Media Gateway Control Protocol (MGCP).

#### 16. (Canceled)

- 17. (Original): The method according to claim 11, further including providing with the at least one of advanced function calls, properties, and callbacks additional protocol-specific functionality to at least one of the plurality of call control protocol.
- 18. (Original): The method according to claim 11, wherein the at least one advanced function calls, properties, and callbacks beyond the common set is accessed using the base plugable call control application program interface.

19. (Original): The method according to claim 11, wherein the extended application program interface provides protocol specific information along with base defined callbacks.

20. (Currently amended): A communications system, comprising: a computer-readable medium; and

computer-readable program code, stored on the computer-readable medium, adapted to be loaded and executed on an operating system of the communications system, the computer-readable program code performing,

providing a common set of function calls, properties, and callbacks to be utilized by a plurality of call control protocols, wherein the call control protocols are Internet Protocol (IP) telephony call control protocols.

providing at least one of advanced function calls, properties, and callbacks beyond the common set, and

accessing the common set of function calls, properties, and callbacks to initiate a communication utilizing one of the plurality of call control protocols.

21. (Original): The communications system according to claim 20, wherein the computer-readable program code further performs:

providing a reduced set of basic system functionality to interact with the common set of function calls, properties, and callbacks; and

executing a software application on the communications system to access the common set of function calls, properties, and callbacks to initiate the communication utilizing one of the plurality of call control protocols.

22. (Original): The communications system according to claim 20, wherein the plurality of call control protocols include at least one of an International Telecommunication Union (ITU) H.323 protocol, a Session Initiation Protocol (SIP), and a Media Gateway Control Protocol (MGCP).

23. (Canceled)

Docket No.: P9889 Appl. No.: 09/750,532

- 24. (Original): The communications system according to claim 20, wherein the computer-readable program code further performs providing with the at least one of advanced function calls, properties, and callbacks additional protocol-specific functionality to at least one of the plurality of call control protocols.
- 25. (Original): The communications system according to claim 20, wherein the communications system is a computer system.
- 26. (Original): The communications system according to claim 20, wherein the communications system is an embedded system.
- 27. (Original): The communications system according to claim 20, wherein the at least one advanced function calls, properties, and callbacks beyond the common set is accessed using the base plugable call control application program interface.
- 28. (Original): The communications system according to claim 20, wherein the extended application program interface provides protocol specific information along with base defined callbacks.

# **REMARKS**

# 35 U.S.C. § 102 Rejection

### Reisman (6,594,692)

The Examiner rejected claims 1-4, 6, 8-14, 16-21, and 23-28 under 35 USC § 102(e) as being anticipated by the patent to Reisman (6,594,692).

Contrary to the Examiner's assertion, Reisman does not disclose that "the call control protocols are Internet Protocol (IP) telephony call control protocols" as recited in claims 6, 16, and 23. In fact, an electronic search the text of said patent to Reisman as downloaded from the USPTO website was performed, and the word "telephony" was not found to appear in Reisman. So it appears that Reisman in fact does not teach IP telephony call control protocols. Therefore, the invention as claimed in claims 6, 16, and 23 is not anticipated by Reisman, so the rejection should be withdrawn. It should be noted that this limitation of claims 6, 16, and 23 has been incorporated via amendment herein into respective independent claims 1, 11, and 20, so it is believed that as a result, none of claims 1-28 are anticipated by the patent to Reisman, so the rejection should be withdrawn.

#### 35 U.S.C. § 103 Rejection

Reisman (6,594,692) v. Sergio (6,195,680)

Reisman (6,594,692) v. Bergler (5,572,675)

The Examiner rejected claims 5, 15, and 22 under 35 USC § 103(a) as being unpatentable over Reisman in view of the patent to Sergio (6,195,680). It should be noted that US Patent No. 6,195,680 should properly be referred to as the patent to Goldszmidt et al. since Sergio is actually the middle name of the first named inventor, German Sergio Goldszmidt. The Examiner further rejected claim 7 under 35 USC § 103(a) as being unpatentable over Reisman in view of the patent to Bergler (5,572,675).

It is believed that the § 103(a) rejections are most in view of the fact that independent claims 1, 11, and 20 have been amended herein to include the limitations of respective dependent claims 6, 16, and 23, and further in view of the fact that the Examiner did not reject claims 6, 16, and 23 based on either of said patents to Goldszmidt or to Bergler. It is therefore believed that the rejection should be withdrawn.

#### Conclusion

In light of the foregoing, reconsideration and allowance of the claims is hereby earnestly requested.

# Invitation for a Telephone Interview

The Examiner is invited to call the undersigned attorney, Kenneth J. Cool, at (408) 850-1229 if there remains any issue with allowance.

Respectfully submitted, INTEL CORPORATION
